Description :

Prsentation de l'diteurDeep in an Arizona mountain, the worlds largest supercollider will probe what happened at the very moment of creation: the Big Bang itself. The brainchild of Nobel laureate Gregory North Hazelius, the supercollider, given the name Isabella, is the most expensive machine ever built. Some people think it may unlock the mysteries of the universe. Some think it will create a mini black hole that will suck in the earth. Powerful televangelist Don T. Spates thunders that Isabella is a satanic attempt to disprove Genesis and challenge God Almighty on the very throne of heaven. Hell do anything to stop Isabella from

reaching its goal. When Hazelius and his team of twelve scientists start up Isabella, they make an extraordinary discovery one that must be hidden from the world at all costs. Wyman Ford, ex-monk and CIA operative, is hired by the US government to wrest from the team their dark secret. A secret that will either destroy the world . . . or save it. This baby roars . . . the pages simply fly Publishers Weekly A superb read! A page-turning thriller about science and religion in which good and evil collide at the speed of light. You'll be up all night with this book Jeffrey Deaver From Publishers Weekly Like Isabella, a giant superconducting supercollider particle accelerator, the thought-provoking new thriller from bestseller Preston (Tyrannosaur Canyon) takes a while to power up, but once it does, this baby roars. The ostensible goal of Isabella's creator, physicist Gregory North Hazelius, is to discover new forms of energy, but what he really wants is to talk to God. The project, located inside Red Mesa (a five-hundred-square-mile tableland on the Navajo Indian Reservation), is behind schedule, so presidential science adviser Stanton Lockwood hires ex-CIA man Wyman Ford to go to Red Mesa and find out what's causing the holdup. Meanwhile, a Navajo medicine man, a televangelist and a pastor who runs a failed mission on the reservation are gearing up to pull the plug on Isabella before she destroys the earth. Science has often tangled with religion in this genre, but Preston puts his own philosophical spin on the usual proceedings, and when he gets his irate villagers with their burning torches headed for the castle, the pages simply fly. Copyright Reed Business Information, a division of Reed Elsevier Inc. All rights reserved. Audiofile Whether it's scientists, CIA agents, greedy politicians, religious fanatics, or entire towns of Navaho Indians--somehow Scott Sowers juggles them all, making what could have been a chaotic story exciting as well as comprehensible. It's easy to go back over the printed page, not so easy if you're driving and listening. Listeners are in exceedingly capable hands--Sowers never lets us down. He weaves together the complex subplots of what happens when science and religion collide. The scientists out on the Red Mesa desert thought they were inventing a particle collider that would allow them to look back into the Big Bang. What they weren't expecting to find was God. D.G.
